DETAILED ACTION

PRIOR ART REJECTIONS

Statutory Basis

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The Rejections

Claims 13-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Zambrano et al. (U.S. 5,489,799)

Zambrano discloses an integrated edge structure with

(13) a number of superimposed semiconductor layers of a first conductivity type (2, 6) and at least two columns (4, 8) of doped regions of a second conductivity type (4, 8), said columns (4, 8) being inserted in said number of superimposed semiconductor layers (4, 8), the column (4, 8) near said high voltage semiconductor device being deeper than the column farther from said high voltage semiconductor device (see Figures 1 and 2);

(14) wherein said high voltage semiconductor device is a power MOSFET (see column 5, lines 5-11);

(15) wherein said number of superimposed semiconductor layers is superimposed to a semiconductor substrate (see Figures 1 and 2);

(16) wherein each one of said at least two columns has a depth decreasing by shifting from said high voltage semiconductor device towards the outside (see Figures 1 and 2);

(17) wherein the doped regions of each one of said at least two columns are superimposed and vertically merged to each other (see Figures 1 and 2);

(18) wherein the doped regions of each of said at least two columns are superimposed but not merged to each other (see Figures 1 and 2);

(19) wherein said first type of conductivity is the N type and said second type of conductivity is the P type (see Figures 1 and 2);

(20) wherein said first type of conductivity is the P type and said second type of conductivity is the N type (see Figures 1 and 2).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Zambrano et al. discloses an integrated edge structure.
